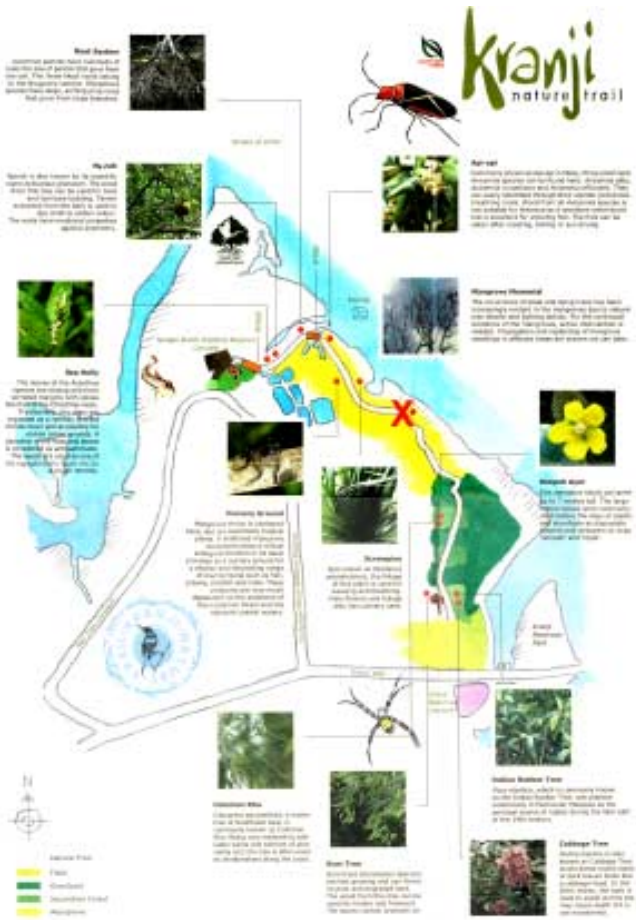
Pollution and Conservation

Worksheet

Around the Kranji Nature Trail

A little bit less



Location and Estimated Time

Kranji Nature Trail (45 min) - from Sungei Buloh Wetland Reserve's Carpark to location mark "X" in map and back.

Objectives

1. To enable students to see the problems caused by indiscriminate littering.

2. To enable students to brainstorm on ways to keep the environment clean.

Background

Ours is a 'throwaway society'. Bottles, cans, plastic and paper often litter our public areas. Our reserve is no exception. Even though the cleaning team goes through the reserve several times a day to keep it clean and tidy, some litter can still be spotted.

Some of this litter is the result of inconsiderate visitors but a lot of it is also brought in by the tide. Take the students on a walk along the Kranji Nature Trail (to point mark "X" in map above) to see the amount and type of rubbish they can spot.

Procedure

1. Pick a copy of the Kranji Nature Trail brochure from the Information Counter at Sungei Buloh Wetland Reserve. Take the students on a walk along Kranji Nature Trail.

2. Have them note the amount and type of rubbish that can be found there.

3. Have them brainstorm on the origins of the rubbish and ways that they can prevent this kind of pollution.
